

Preventative Maintenance Plan Summary and Quote

Advanced Laundry Systems will:

- Supply a **fully qualified technician** to check over your laundry equipment (we will try to provide the same technician to perform your PM each time)
- Grease, lube, change the oil (if your machines require oil), adjust and clean equipment (belts which need to be replaced will be billed in addition to the Preventative Maintenance Plan price)
- Provide our PM Checklist for each scheduled Preventative Maintenance appointment including an explanation of potential problems that may affect the future operation of your equipment
- notify customer of any needed repairs before performing the work
obtain and maintain a machinery database for each customer

Our "Preventative" Maintenance programs will not only take care of the factory recommended adjustments and lubrication maintenance - our technicians will thoroughly check your machines for any problems that may affect the future operations of your equipment. One of our technicians will personally evaluate your machinery to "tailor-make" a plan fitting your needs. We can catch potential problems before they become real problems that mean down-time for your department or business.

After each Preventative Maintenance service call you will be given our PM Service checklist which will include an explanation of any additional parts or repairs that may be needed to keep the equipment running at peak efficiency. All additional parts or repairs will need authorization from your company before being scheduled or ordered. If possible, all work will be completed at the time of the initial visit. Any additional labor & travel charges will be billed at Advanced Laundry Systems prevailing rates.

Due to the extensive brands, models and age of equipment Advanced Laundry Systems repairs, it is impossible to carry a full parts inventory in our service vans. If you would like, Advance Laundry Systems will supply you with a suggested spare parts list for your equipment. If your facility stocks the recommended spare parts, the down time could be reduced considerably and additional trips could be avoided.

A Preventative Maintenance Plan reduces your risk of down time for your laundry equipment by keeping them running at peak performance, catching and repairing a problem while it is minor, helping to prevent problems becoming a major repair. Let Advanced Laundry Systems maintain your equipment to help eliminate the need for emergency service calls and lost time for your laundry. If you have any questions contact Advanced Laundry Systems at 303-432-2504.
